

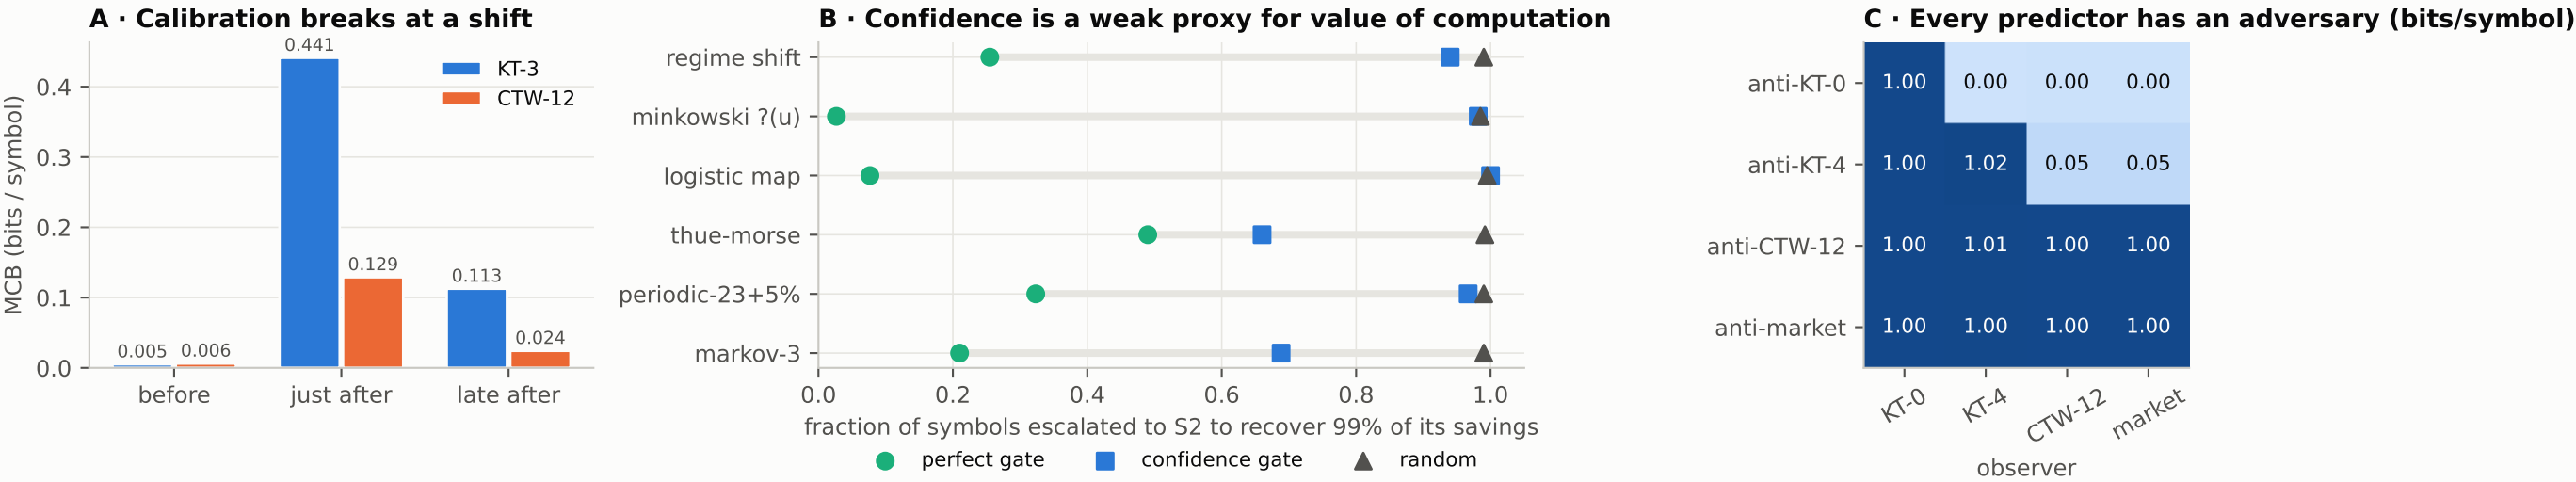

Fig. 3 · Dynamics on the ground floor: shift, escalation, competition

E001, 3 seeds. A: CORP miscalibration in windows around a regime change (structure-averaging CTW recovers ~4× faster). B: S1 = KT-2, S2 = CTW-12; sources where S2 saves < 0.01 bits omitted (never escalate). C: row = diagonal sequence of a predictor (always emit its less-likely bit); market = log-score market over {KT-0, KT-4, CTW-12}.
